Team ID	SWTID-2026-1660
Project Title	AI WEATHERWISE API
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	The primary objective is to revolutionize the loan approval process by implementing advanced machine learning techniques, ensuring faster and more accurate assessments.
Scope	The project comprehensively assesses and enhances the loan approval process, incorporating machine learning for a more robust and efficient system.
Problem Statement	
Description	Addressing inaccuracies and inefficiencies in the current loan approval system adversely affects operational efficiency and customer satisfaction.
Impact	Solving these issues will result in improved operational efficiency, reduced risks, and an overall enhancement in the lending process, contributing to customer satisfaction and organizational success.
Proposed Solution	
Approach	Employing machine learning techniques to analyze and predict creditworthiness, creating a dynamic and adaptable loan approval system.
Key Features	- Implementation of a machine learning-based credit assessment model.

	- Real-time decision-making for quicker loan approvals. - Continuous learning to adapt to evolving financial landscapes.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	- Processor for API development and AI processing	- Intel i5 / AMD Ryzen 5 or above
Memory	- RAM required for development and testing	- 8 GB RAM
Storage	- Storage for source code, database, and AI models	- 256 GB SSD or above
Software		
Frameworks	- Backend API development framework	- Python, Flask / FastAPI
Libraries	- AI, data processing, and API libraries	- OpenAI API, Requests, Pandas, NumPy
Development Environment	- IDE and API testing tools	- VS Code, Jupyter Notebook, Postman
Data		
Data	- Blog content, user data, prompts, and generated articles	- JSON / CSV / Database (SQLite/MySQL)
